

Advanced Flight Seat Search

What the app does, and how to use it

A pocket-sized tool for people who pay for travel with points. It finds award seats across sixteen airline loyalty programs, tracks United upgrade space, and helps you decide whether points or cash is the better way to buy a given ticket.

WHAT'S INSIDE

1 What the app is for

The six tabs, and getting in

3 Route

One airport pair, many dates

5 UA Upgrades

Where the upgrade space is

7 Points

Points versus cash, decided

9 Small things that help

Habits worth picking up

2 Region

Award seats across whole regions

4 Results

Reading cards, filtering, calendar

6 Alliances

Who flies with whom

8 Transfers

Card points to airline miles

1 What the app is for

Six tools behind one passcode.

Award travel involves a lot of separate questions: is there a seat, on which airline, for how many points, and is that a good price? This app puts the answers in one place, on a screen sized for a phone — and works the same way in a desktop browser.

TAB	WHAT YOU USE IT FOR	DAILY ALLOWANCE
Region	Award seats across whole parts of the world	Uses it
Route	Award seats on one airport pair, date by date	Uses it
UA Upgrades	United flights with upgrade space open	Free
Alliances	Airline, alliance and program directory	Free
Points	Whether to pay in points or cash	Free
Transfers	Which card points reach which airline	Free

Getting in

The app opens to a passcode pad. Tap in your four-digit PIN and it unlocks — there is no username to remember, and you stay unlocked for the rest of the browsing session.

CONTROL	WHAT IT DOES	WHERE
Passcode pad	Four digits, no username	Opening screen
Request Access	Name, email and the PIN you'd like; access follows approval	Under the pad
Forgot PIN	Sends a temporary PIN to your email address	Under the pad
Change PIN	Current PIN, then the new one twice	Header
🌙 / 🌞	Light or dark; remembered for next visit	Header and pad
Number badge	Search allowance left today; resets daily	Header

The passcode screen, with access requests and PIN recovery underneath.

The ⓘ button in the header opens a refresher on what each tab does.

2 Region — explore, then narrow

For when you know roughly where you'd like to go, but not exactly.

Region search answers the question "what can I get to Europe on, sometime in the next two months?" Instead of one airport pair, you pick a part of the world to leave from and a part of the world to land in, and the app sweeps everything in between.

Then tap **Explore Region**. Because a sweep can take a while, a **✕ Stop** button appears alongside the results if you want to cut it short and work with what has come back so far.

The screenshot shows the 'FLIGHT SEAT SEARCH' app interface. At the top, there's a header with 'FLIGHT SEAT SEARCH', a '1000' balance, a moon icon, and a 'Change PIN' link. Below this is a navigation bar with 'Region' (selected), 'Route', 'UA Upgrades', 'Alliances', 'Points', and 'Transfers'. The main content area is divided into several sections: 'MILEAGE PROGRAMS' with a grid of 16 buttons (United, Aeroplan, Delta, American, Alaska, Flying Blue, Singapore, Turkish, Virgin Atl, Lufthansa, Qantas, Emirates, Qatar, JetBlue, Finnair, SAS); 'CABIN' with buttons for Any, Eco, Prem, Biz (selected), and First; 'ORIGIN REGION' with buttons for North America, South America, Europe, Africa, Asia, and Oceania; 'DESTINATION REGION' with the same six buttons; and 'DATE RANGE' with 'START' and 'END' labels and date pickers set to 08/27/2026. At the bottom is a large blue 'Explore Region' button.

The Region tab: programs, cabin, both regions and dates on one screen.

CONTROL	CHOICES	NOTES
Mileage programs	16 programs, from United and Delta to Qatar and SAS	Pick several; one always stays on
Cabin	Any · Eco · Prem · Biz · First	Toggles, so Biz and First combine
Origin region	North and South America, Europe, Africa, Asia, Oceania	Opens a country list underneath
Destination region	The same six	Also filterable by country
Date range	Start and end date	Up to 60 days

Picking a region reveals its countries, so a broad search can be narrowed to specific destinations.

The same screen in dark mode — every tab follows the setting.

3 Route — one city pair, many dates

For when the trip is already decided and you need a seat.

Route search takes an origin and a destination airport code and checks every date in your window across whichever programs you've selected. The program, cabin and date controls work exactly as they do on the Region tab, and the end date follows the start date automatically, capped 60 days later.

REACH FOR REGION WHEN...

You know the continent, not the city

REACH FOR ROUTE WHEN...

Both airports are already fixed

You're hunting for any good redemption

You need this particular trip

The dates are flexible and wide

You want every date for one pair

Both searches share the same results area, the same filters and the same calendar view, so anything you learn on one tab carries straight over to the other.

A route search set up from Newark to London.

4 Reading and working with results

What each card tells you, and the ways to cut the list down.

Results arrive as one card per bookable itinerary, sorted by date, with a running count in the corner. Everything you need for a first pass is on the face of the card.

ON THE CARD	WHAT IT TELLS YOU
Airports and cities	Where the itinerary starts and ends
Date	Day of travel
Program badge	Which loyalty program prices this seat
Cabin · (n left)	Class of service and seats remaining at that price
Nonstop / n stops	Whether you change planes
Times and flights	Departure, arrival and flight numbers; +1 means you land the next day
Points · taxes	The award price and the cash still due on top

Results for one route: cabin, seats left, routing, times and points on every card.

BUTTON	WHAT HAPPENS	WHERE
▼ Details	Expands the aircraft, operating carrier and, on connecting itineraries, the connection breakdown	On each card
Book →	Opens the airline's own booking page with route and date already filled in	On each card
 Share	Hands you a tidy summary — route, cabin, price, taxes and a booking link	On each card
↓ CSV	Exports what's currently on screen to a spreadsheet	Results header
× Stop	Cancels a running search, keeping what has arrived	Results header

Filters sit above the list, with a running result count beside them.

Details expanded — aircraft, carrier and timings for the itinerary.

Narrowing a long list

A wide search can return hundreds of cards. Five controls sit above the results, and **Clear all filters** puts everything back.

FILTER	OPTIONS
Sort by	Date · Points (low to high) · Duration (fastest) · Program
Program	Any single program present in the results
Airport	A three-letter code, to pin down a connecting point
Airline	A carrier code, such as UA or LX
Direct flights only	Hides anything with a plane change

The calendar view

 **Calendar** swaps the list for a month-by-month grid showing the cheapest price available on each day, so a good week jumps out immediately. Tap any day to filter the results down to that date, and  **List** to switch back.

COLOR	MEANING
 Green	Cheapest dates in your results
 Amber	Middling
 Red	The priciest days found

Two months of prices at a glance; tap a day to filter.

5 **UA Upgrades — where the upgrade space is**

United flights with confirmable upgrade inventory open.

This tab tracks upgrade availability on United flights, so you can point your PlusPoints at a flight that will actually clear rather than sitting on a waitlist. Set the filters, then tap **Search Upgrades**.

FILTER	OPTIONS
Origin / Dest airport	Three-letter codes, such as ORD and LHR
Origin / Dest region	Any of the six world regions
Date from / to	A departure window
Flight #	A specific flight, such as UA123
Aircraft	A type or fragment, such as 777
Min inventory	Any (PZ1+) · PZ2+ · PZ3+ · PZ4+ · PZ6+ · PZ9 only
Sort by	Date · Inventory (high to low) · Origin · Destination

Upgrade filters, with a note showing how current the list is.

Each card shows the route and cities, the date and flight number, the aircraft, and the scheduled times where they're known. The figure on the right is how much upgrade space is open, and underneath it, how recently that flight was last confirmed to have it.

ON THE CARD	WHAT IT MEANS
 PZ6 and up	Plenty of space — comfortable odds
 PZ3 to PZ5	Some space, worth a look
 PZ1 to PZ2	Thin; likely to go quickly
"seen 3 days ago"	How recently the space was last confirmed
Book on United →	Opens that flight on the airline's site
 Share	A summary of the flight and its open space

The whole filtered list exports with  CSV, and long lists show the first 200 matches — tighten the filters if you hit that.  Request Updated Data asks for a fresh sweep when the list is looking stale.

Upgrade results out of Chicago, sorted by date, showing open inventory per flight.

6 Alliances — who flies with whom

A reference for the question "can I book this airline with those miles?"

The Alliances tab is a directory of the three global alliances, listing every member airline together with the loyalty program its miles actually live in. The search box matches on airline name, two-letter code or program name, so "Avios", "AY" and "Finnair" all land in the same place.

ALLIANCE	AIRLINES LISTED
★ Star Alliance	26
⊕ oneworld	16
◆ SkyTeam	19

The **Shared Mileage Programs** panel at the top is the part worth knowing about. Several airlines pool into a single currency, so miles earned on any of them are spendable across the rest — and the app flags those relationships on each airline as you scroll.

Shared currencies first, then each alliance with its members and programs.

SHARED CURRENCY	AIRLINES WHOSE MILES LAND IN THE SAME ACCOUNT
Miles & More	Lufthansa, Swiss, Austrian, Brussels, LOT, Croatia Airlines
Avios	British Airways, Finnair, Iberia, Qatar
Flying Blue	Air France, KLM, TAROM
Alaska Mileage Plan	Alaska, Hawaiian
PhoenixMiles	Air China, Shenzhen Airlines

Searching for a single carrier collapses everything down to the match, showing its alliance and which other programs share its currency — a two-second answer to "where do I need miles to fly this airline?"

One airline, its alliance, and the currency it shares with three others.

7 Points — is this worth paying in miles?

A straight verdict on points versus cash for one specific ticket.

You've found an award seat. Should you actually use your points on it? Pick the airline, then enter three numbers:

INPUT	WHAT TO ENTER
Cash price	What the same ticket would cost you in money
Points required	The award price the airline is quoting
Taxes & fees	The cash still due on the award ticket

The app works out what each point is buying you, after subtracting the taxes you'd pay anyway, and compares that against what points in that program are generally reckoned to be worth. Underneath the verdict is the full arithmetic, so you can see how the answer was reached rather than taking it on faith. Your last entry is remembered.

The screenshot shows a mobile app interface for a flight seat search. At the top, there's a header with 'FLIGHT SEAT SEARCH', a signal strength indicator, a battery icon, and a 'Change PIN' link. Below this is a navigation bar with 'Region', 'Route', and 'UA Upgrades'. Underneath, there are tabs for 'Alliances', 'Points', and 'Transfers'. The main content area is titled 'CASH VS. POINTS' and shows the 'AIRLINE' as 'United (UA)'. It displays the 'CASH PRICE (\$)' as '2400' and 'POINTS REQUIRED' as '88000'. Below this, it shows 'TAXES & FEES ON AWARD (\$)' as '85'. A large green box displays the verdict: '2.63¢ Use Points', with a note: 'You'd get 2.63¢ per point — well above the 1.30¢ that United MileagePlus points are typically worth.' Below the verdict is a 'BREAKDOWN' section with a table:

Airline	United · Star Alliance
Program	United MileagePlus
Cash fare	\$2400.00
Less award taxes	-\$85.00
Value bought by points	\$2315.00
Points required	88,000
Your value per point	2.63¢
United MileagePlus baseline	1.30¢
Difference	+102% vs baseline

At the bottom, there's a small disclaimer: 'Baselines are rough consensus estimates of what a point is worth, not guarantees. Taxes and carrier surcharges vary a lot by route and program.'

A verdict with the full breakdown underneath.

VERDICT	WHEN YOU'LL SEE IT	WHAT TO DO
Use Points	Each point buys meaningfully more than the program's baseline	Book the award
Toss-Up	Close to the baseline	Let other factors decide
Pay Cash	Below the baseline, or the taxes swallow the fare	Save the points for a better trip

The baselines are rough consensus estimates of what a point is worth, not promises. Taxes and carrier surcharges vary a lot by route and program.

8 Transfers — moving card points to airlines

Which points go where, at what rate, and what's on sale right now.

Most award bookings start with credit card points rather than airline miles. This tab lays out the transfer partners for the six major rewards currencies, with the ratio for each partner airline and a badge showing which alliance that airline belongs to.

REWARDS CURRENCY	AIRLINE PARTNERS
Amex Membership Rewards	16
Chase Ultimate Rewards	10
Capital One Miles	18
Citi ThankYou Rewards	15
Bilt Rewards	19
Wells Fargo Rewards	8

Transfer partners by card, with live bonuses flagged at the top.

VIEW	THE QUESTION IT ANSWERS
By Card	"I have these points — where can they go?"
By Airline	"I need Turkish miles — which cards get me there?"
Search box	Filters either view by airline, code or program name

When a transfer bonus is running it appears inline: a banner counts how many are live, and the affected partners show the boosted ratio with the standard one struck through, along with the bonus percentage and its expiry. Bonuses appear for everyone as soon as they're posted.

Worth repeating: transfers are one-way and can't be reversed. Confirm the ratio in your own account before moving anything — published rates change often, and some cards in a family transfer at a lower rate than others.

9 Small things that help

Habits worth picking up.

HABIT	WHY IT PAYS OFF
Search wide, then filter	Several programs at once costs the same as one narrow search, and you see more
Check the calendar first	Shifting a trip by two days is often the cheapest change you can make
Share rather than screenshot	The summary carries route, cabin, price, taxes and a booking link in one message
Export before it changes	Award space moves; a CSV is a snapshot you can compare against later
Stop a long search early	Region sweeps keep whatever they've already found
Run the numbers first	The Points tab costs nothing, and a transfer can't be undone

Availability shown here is what the airlines were offering when the search ran. Seats come and go quickly — always confirm on the airline's own site before making plans around a find.
